

TIME ARROW®

Mitigate project risk.

Illustrate a project's lifecycle using timeline animation and attachments imported from Microsoft Office.

Product Overview

TimeArrow® takes data from different versions of a project and animates it so that stakeholders can see where a schedule is changing and why. TimeArrow also supports attachments (e-mails, documents, etc.), enabling project managers to give a detailed explanation of why a project schedule has changed without having to take the schedule off the screen.

How it Works

- Import multiple versions of a schedule from Microsoft Office Project
- Call out important events in the project that drive schedule changes
- Add attachments (e.g. e-mails, documents) that reflect project changes
- Build an animated presentation that layers the versioned schedules, events, and attachments

Features

- Import from Microsoft Office
- Attach supporting documents
- Create a project movie in one click
- Customize movie look and feel
- Browse timelines with VCR controls
- Show dependencies between tasks
- Show unexpected project events
- Distribute project movies to your team
